

Inch-Size Closed-End Punch Strippers with Retaining Shoulders

Tough as Steel, Resilient as Rubber.

Product Features

- Very High Load bearing capacities
- Strippers are smaller in size than steel or rubber strippers for exerting the same pressure.
- Smaller design enables closer center-to-center distance for punches.
- Ideal for punching odd shaped holes.
- Assures positive stripping
- Urethane strippers are safer than steel springs, since they do not fragmentize, preventing damage to Dies or injury to operators.

Installation Step #1

Installation is very Easy. The under-sized I.D. of the stripper pressfits onto the punch shank.

Step #2

During the first stroke (without the stock), the punch pierces the closed end to the shape of the punch. This produces a 'custom' stripper the exact same shape as the punch

Step #3

The Closed-End stripper holds metal flat and strips easily. Closed-End Strippers are ideal for odd shaped punches with sharp corners. No dimpling of metal

STANDARD DUROMETER : 95 A; STANDARD COLORS : RED & BLUE
