

*This revolutionary new design incorporates two grades of Urethane integrally molded, in the liquid state, and then heat cured.*

## Product Features

- The body of the Closed-End Punch stripper is made of a flexible, softer Urethane elastomer: 80A, or 90A, or 95A enabling deflections of 35%, 25% and 15% respectively.
- The 75D Durometer Hard face is elastic, durable and does not mark the surface of the sheet metal. (unlike Plastic faces which are not elastic, and do not have memory)
- For odd shaped holes, or for shapes with sharp corners, the hard face works similar to a metallic stripper plate, that is machined to match the shape of the punch tip. .
